Product Release Bulletin

Klean Sweep Features

Products:

- 810 and 1012 Commercial Klean Sweeps

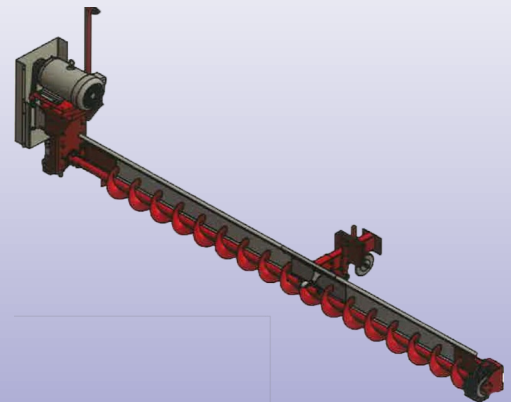

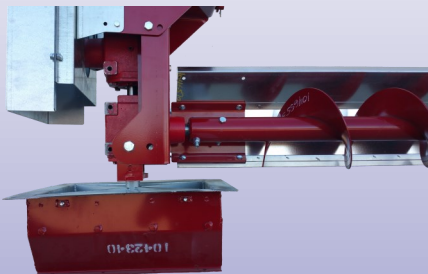

Product Improvement Overview: The 810 and 1012 Series Commercial Klean Sweeps have been re-designed with a 2.25:1 double gearbox drive to allow for the sweep to be positioned closer to the floor. The sweeps also incorporate the new sweep end wheel with a cycloidal gear reducer located inside the wheel. A new carrier will also be included with sweeps for 48' and larger bins. The new carrier sits behind the sweep for less interference as the sweep drives into the grain.

Catalog Numbers:

- **810 Series** will have a 1 inserted after the bin size (Ex BK10241SD)
- **1012 Series** will have the "1" changed to a "2" after the bin size (Ex. BK12242SD)
- For the complete list of part numbers please refer to the bin unloading sections of your 2016 Product Catalog

Manufacturing Start Date: 11/1/2015*

- Orders shipped prior to 1/1/2016 will have the new gearbox parts backordered until they are in stock 1/1/2016. At that time we will ship out all backorders to complete the shipment.
- If complete 810 to 1012 Sweeps are needed prior to 1/1/2016 sweeps can be ordered with the old enclosed drive and new sweep wheel. Consult the factory or your Territory Manager for the part numbers. This option will be discontinued once the new gearboxes are in stock.
